DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 13 October 2005 has been entered.

Allowable Subject Matter

2. Claims 1, 29, 46, 47, 56-85, 88-108 renumbered as 1-55 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or make obvious obtaining desired relationships among objects represented in a database by filtering queries including a first geometry and a desired relationship between the first geometry and a second geometry through a series of filters, in combination with all the limitations recited in claims 1, 29, 46, 47, 56-58, 89. The closest prior art of record Barbara et al provided by the applicant uses query rectangles and processes the query through multiple stages but does not use the specific algorithm recited by applicant in claims 1, 29, 46, 47, 56-58, 89 in determining what to include into or exclude from the final query result.

Claims 59-85, 88, 90-108 being further limiting and definite are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Andersen et al (US 2005/0060273) teach creating a searchable word index of a scanned document including multiple interpretations of a word at a given document location.

Krtolica (US 2003/0012438) teaches multiple size reductions for image segmentation using bounding rectangles.
